KMV innerVision  
“X-ray Vision for the Production Line”

KMV’s unique and innovative *innerVision* X-ray inspection products are designed specifically for the Medical and Pharmaceutical manufacturing industries to help ensure 100% product quality utilizing non-destructive inspection on the production line.

In today’s global marketplace, absolute quality assurance is required on every component, assembly and package in the medical device and pharmaceutical manufacturing industries. This can be achieved through sound inspection systems put in manufacturing processes that help guarantee 100% quality. Many manufactures are looking for ways to check all assemblies as they are being produced and not just sample check a production run. KMV’s *innerVision* products can be used where manufacturers need to check for internal defects in “all” manufactured parts or packages after the assembly or packaging process.

KMV’s *innerVision* products have been designed to be safe and easy to implement on the factory floor. Its small size, low power requirements, high inspection throughput and network connectivity make it the first reliable, non-destructive inspection system for the production line.

Attached to this document is a picture of KMV’s *innerVision* product in use.

Please contact us if you have any questions regarding KMV’s *innerVision* X-ray vision inspection products.
